From Egg to Apex

6 steps to vibe code a classroom web app with Claude, Gemini or ChatGPT.
Sample expedition: a cell organelles matching game for 7th grade science.

EGG

PART 1 · PLAN THE EXPEDITION

1

STEP 1 · DECIDE WHAT TO BUILD

Choose your dig site

One problem, one small app. Start with something you already teach: a worksheet students rush through, a review activity that falls flat, or a concept students always mix up.

EXAMPLE
My 7th graders mix up which organelle does which job.

2

STEP 2 · WRITE YOUR PROMPT

Pack your field kit

Give the AI everything it needs: your **topic, standard and what students should be able to do**; your **vocab, questions and answer key** (or paste in the handout itself); and your **grade, reading level, devices and accessibility needs**.

EXAMPLE PROMPT
"I'm a teacher. Build me an interactive web app for my 7th grade science students: a matching game on Georgia standard S7L2a. Use exactly this content: [the 7 cell structures and their jobs]. Students must get each item right to move on; when they miss, give a hint, never the answer. Build it as one self-contained HTML file with no logins."

PART 2 · HATCH IT

3

STEP 3 · GENERATE THE APP

Hatch it

Paste your prompt and let the AI build a first draft. Don't expect perfect: a first draft is a starting point.

EXAMPLE
Start from the starter prompt in **Your turn**. Paste it into **Claude**, **Gemini** or **ChatGPT** and hit go. In about a minute, a playable game appears.

4

STEP 4 · TEST AND REVISE

Evolve it

Play it like a student: try wrong answers and check every fact. Then ask for one change at a time. If something breaks, describe what you see.

EXAMPLE PROMPTS
"Add a hint when they get it wrong."
"The Next button does nothing."

↻ **Expect a few rounds: test, ask for a change, and test again until it's right.**

PART 3 · RELEASE IT

5

STEP 5 · SHARE IT WITH STUDENTS

Release it into the wild

Give students a plain web link, no AI account needed. Three ways: **Google Apps Script**, **Netlify**, or **embed it in your LMS**.

EXAMPLE PROMPT
"Convert this into a Google Apps Script web app with a Code.gs file and an index.html file that can be embedded in Canvas, and tell me exactly where to paste each one and how to deploy it."

APPS SCRIPT TIPS
Set **Who has access** to **Anyone**. After you change your script, deploy a **New version** so students see it. Test your link in a **private window** first.

6

STEP 6 · REUSE YOUR PROMPT

Leave your tracks

Save the recipe so the next app takes minutes: a prompt template, a Claude Project, or a Claude skill. Using Gemini or ChatGPT? Save it as a Gem or a custom GPT.

EXAMPLE PROMPT
"I want to create a skill for building review games for my class." (Attach your best prompt and an app you liked.)

APEX
Now go build!
